

SUPERVISION[®]

LONG RANGE SURVEILLANCE

"On one particular night another agent and I were on LP/OP assignments approximately 250 yards from a known "drop" location. My partner was equipped with a typical Gen 3 green light scope and I with my SuperVision. As the targets approached, I was able, with the zoom capabilities, to capture all the activities taking place to include bundle exchanges where my partner could only see "ants on the hillside". I looked through his green light scope just for comparison sake and saw exactly that, "ants on a hillside". Without SuperVision, we would have missed a 60 pound narcotics exchange, the subsequent arrest of 4 individuals and the seizure of 2 firearms."

SuperVision Long Range Surveillance

"When something's going down in the dark, I need to be close enough to identify the subject or situation without being compromised." For law enforcement professionals like you, you've got to be close enough to identify exactly what's happening, but not compromise yourself or your operation. SuperVision gives you crystal clear images in any lighting condition, to get you the situational awareness, intelligence and the evidence you need.

The Tactical Edge

SuperVision is built on an entirely new, patented technology. Xenonics'engineers have taken solid-state, wide-dynamic range imaging to next level of sophistication with the application of digital signal processing (DSP) & image enhancement software that brings otherwise indistinguishable forms into sharp identifiable objects. This advanced technology, built in SuperVision, gives law enforcement the tactical edge they need to identify people and objects with crystal clarity.

SuperVision -- a Class by Itself

Unlike most post Desert Storm Gen I, Gen II or Gen III image intensified night vision devices that have been adopted for law enforcement, SuperVision has been built from the ground up, especially designed for officers and agents and their special requirements in an increasing dangerous urban environment. While there are plenty of night vision and thermal imaging products on the market, only SuperVision is so unique that it's in a class by itself.

Key Features (SuperVision sold separately)

- Low-Light CCD Sensor
- Rechargeable Li-ion Battery
- 25-100x Zoom Capability
- Smart Digital Battery Charger
- Digital Signal Processing
- Lightweight, Ruggedized
- HDTV Display
- Patented Technology
- Battery Runtime: 2 hours

Uses and Applications

SuperVision is designed to give law enforcement officers and agents the edge at night, whether on patrol, in pursuit, search & rescue, surveilling, no matter what the night may bring. From gathering intelligence to recording evidence, see the details you need in the dark or shadows, from a safe distance.

The Difference is Black and White

In field tests, operators report significantly better degrees of detail, overall contrast, full moon similarity and range of shades with SuperVision. That's because SuperVision provides more discriminating shades of intensity between black and white, resulting in better contrast and depth perception.

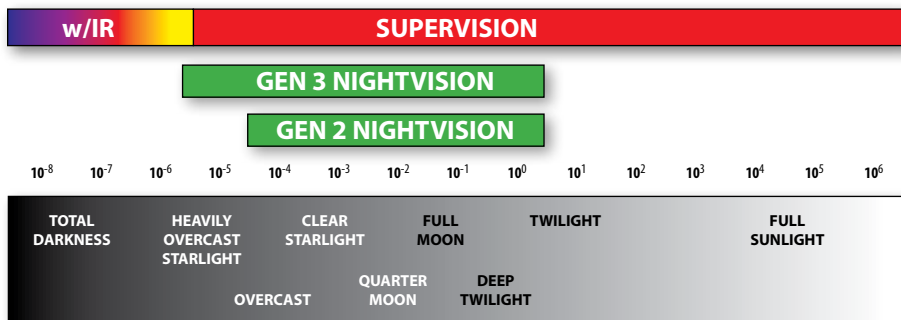

To See and Not Be Seen

SuperVision's 2-8X variable zoom gets you close without actually getting close with the capability to identify subjects and objects even with bright light in dark settings without blooming from a safe distance, without compromise.

Protect & Serve 24-Hours a Day

SuperVision's revolutionary wide-dynamic range imaging platform, with proprietary digital signal processing, let's you identify what you need, no matter the conditions, from total darkness, to full daylight, and even with bright lights in otherwise dark situations.

Lens Specifications

Magnification (with SuperVision)	25-100X
Optical Diameter	80 mm
Focal Length	400 mm
Focal Ratio	f/5.0
Coating	fully multi-coated
Optical Type	air-spaced doublet
Glass Material	crown/flint
Optical Quality	diffraction limited
Finder Scope	6 x 26 correct image
Focuser	1.25" rack and pinion
Mounting	1/4" x 20
Length (with Adapter)	18.3" [46.4]
Weight (with Finder Scope)	4.1 lbs [1.87 kg]

World Class Development and Manufacturing

Xenonics Holdings, Inc. (NYSE AMEX:XNN) is the world's leader in the development and manufacturing of advanced, lightweight and compact ultra-high intensity illumination and low-light viewing products for the military, law enforcement and public safety.
